ETL - Load Flat File to Database

Download all .CSV files from SFTP site

Remote Path: **/ETL/***
Local Path: **C:\users\sandboxuser\desktop\ETL**

Connect to SQL Database

Server: **LocalHost**
Database: **SampleData**

For each row...

Read the CSV line by line...

If the line of data is NOT empty...

Split the line on the comma and store in a runtime variable

Use SQL Query to insert data with variables
Query:
‣ **INSERT INTO dbo.CustomerContact VALUES ('<variable>', '<variable>', '<variable>', '<variable>', '<variable>', '<variable>')**
